CASE STUDY · CONVERSION, GROWTH & RETENTION

DAPPERDEN

I audited a real Indian streetwear store's journey from first visit to placed order. Then I rebuilt it as a **working store**, planned its **launch campaign** and built its **retention flows**.

Prithwiraj Mukherjee
Marketing
Live store: dapper-denn.netlify.app
Repo: github.com/prithwirajmukherjee15-cmd/DapperDen-Clothing

THE PROBLEM

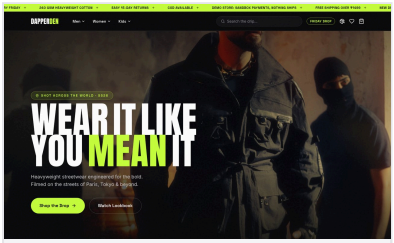

- **Doubts answered too late.** Free shipping, COD, returns and fabric quality only came up at checkout, or never.
- **A catalogue that ignored how fans shop.** Fans look for their fandom, not for "a T-shirt".
- **Browsing and sizing friction.** Too many steps to find a product, and no clear sizing.
- **A checkout not built for India.** UPI and cash on delivery weren't front and centre.

THE ONE IDEA

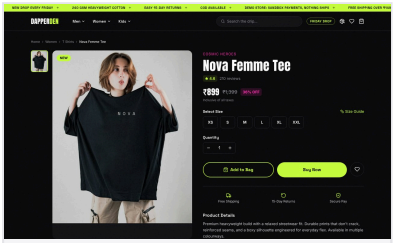

Answer the shopper's next doubt where they have it.

Not more discounts (they don't say whether it fits) and not a FAQ page (nobody leaves a product to read one). Every promise appears on the product page and again at checkout, exactly where the question comes up.

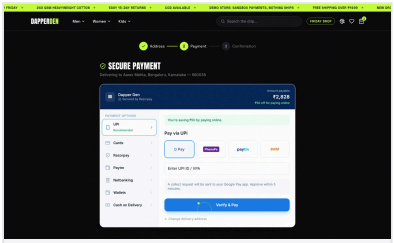

WHAT I BUILT

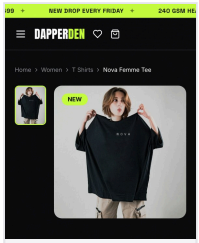

Trust bar answers 4 doubts in second one

Product page: size guide, reassurance

UPI-first, 3-step guest checkout

Phone-first

BROWSE BY FANDOM
115 products in 6 themed collections, plus search suggestions and size/price filters.

DECIDE
MRP vs price, a size guide one tap away, and a fit score from real buyers' answers.

PAY THE INDIAN WAY
UPI first; cards, EMI, wallets and COD one tap away. Priced on the server.

AFTER THE ORDER
Branded receipt email, tracking with no account, shipping updates, a fit question.

LAUNCH: THE FRIDAY DROP

₹1L	~1,900	~115	~3
Budget: Meta ads, 12 micro-creators, content	Drop-list sign-ups (email + WhatsApp)	Orders on drop night at 6%	Drops to pay back the list

A weekly ritual ("Drops Friday, 8 PM") built on an owned list instead of one-off clicks. All figures are planning assumptions. Night one earns back about half the spend, and the plan says so: cost per sign-up is the number that decides it.

RETENTION, BUILT IN

- **₹50 off for paying online:** a margin lever against COD refusals.
- **Give ₹200, get ₹200:** a code and WhatsApp share on every receipt, with server-side abuse rules.
- **Bag reminder:** one email, with a link that refills the bag on any device.
- **"How did it fit?":** answers become a true-to-size score.
- **Content:** 4 brand reels, 3 launch creatives, a drop page with source tracking.

EVIDENCE, KEPT HONEST

CONFIRMED	STILL TO VALIDATE
The friction points came from auditing a real store's journey.	What each friction point costs in lost orders.
The rebuilt journey works end to end on the live site.	Conversion uplift: needs real traffic and an A/B test.
Orders are saved, priced on the server, emailed and trackable.	The right free-shipping threshold and coupon levels.

MY ROLE

I ran the audit, set the priorities, and wrote the messaging, merchandising, offers, campaign and brand voice. I built the store by **directing AI coding tools** from the audit, which is how one marketer takes a conversion problem to a shipped fix without an engineering team.

CRO audit · Messaging · Merchandising · Pricing & promos · Campaign planning · Referral · Lifecycle email · Attribution · Brand & content · Measurement plan

Demo store. Payments are sandboxed and nothing ships. Photos: Unsplash and Pexels, retouched with original prints.
